All your enquiries in one CRM, with a count of how many came in.

Enquiries reach Glad U Came on Instagram, WhatsApp, the website chat and the website form. We want all four to land in one CRM, get a quick reply, and be counted every day, week and month.

Where things stand today

97%	11 s	401	2,658
OF CHATS HANDLED CLEANLY ON WED 4 NOV	MEDIAN REPLY TIME ON INSTAGRAM	CUSTOMER MESSAGES IN SIX DAYS	PAST CHATS ALREADY STORED

Who writes to you

In six days on Instagram we saw very different people, and each needs a different reply.

Brands

They want a campaign, creators or reach. This is where the revenue is. They need a fast reply, their budget range and a phone number, and then a call with your team.

Creators

Some you invited, some wrote to you first. Many ask if the work is paid or barter. Your team should handle that talk, so it must not get buried.

Everyone else

Vendors, promotions, job seekers, auto-replies and people asking for an update. The agent already tells these apart so your team can focus on brands and creators.

What is not working yet

Enquiries sit in four places

A brand may fill the website form, then message on Instagram, then move to WhatsApp. Each app only knows its own part of the story. Nobody sees all of it.

Nobody knows the numbers

How many enquiries came in this week? Which place sends the most brands? Today you would have to count by hand. There is no list of who is waiting, who went quiet and who is ready to sign.

What we suggest

Keep the Instagram agent as it is. Add WhatsApp, the website chat and the website form. Send everything into one CRM that your team opens every morning to see who to talk to first, and how many enquiries came in.

Source. Figures are from the Instagram performance record for 30 Oct to 4 Nov 2026, measured on the live @gladucamepr account.

What you get

LIVE TODAY

1. Instagram

- Replies to every DM on @gladucamepr in about 11 seconds
- Reads the full chat first and stays out when your team is already talking
- Never quotes fees or promises dates. Your team does that

NEW

2. WhatsApp

- Same replies and same rules, on a verified Glad U Came business number
- Sees the Instagram chat, so a brand never repeats itself
- Follow-up messages for creators who went quiet

NEW

3. Website chat and form

- The website chat answers visitors straight away and asks the right first question
- Every form entry gets a quick reply on WhatsApp or email, depending on what they gave
- Each enquiry is sorted as a brand, a creator or other

NEW

4. One CRM

- One profile per brand or creator, with every chat from every place
- Stages: New, Warm, Call booked, Negotiating, Won, Not now
- Tags for brand, creator, paid and barter. Budget and phone number are saved automatically

How an enquiry moves through it

1
It arrives
A brand fills the form at 11pm.

2
Quick reply
They get a message in seconds and are asked their budget range.

3
Saved and sorted
The CRM creates the profile, tags it as a brand and marks it hot.

4
They switch apps
They message on WhatsApp. The agent already knows what was said.

5
Your team closes
Your team sees a short summary, makes the call and moves it to Won.

Enquiry counts

Every enquiry from every place is counted automatically. You can open the CRM and see:

YOU CAN SEE	PER DAY	PER WEEK	PER MONTH
Total enquiries	Yes	Yes	Yes
By place (Instagram, WhatsApp, website chat, website form)	Yes	Yes	Yes
By type (brand, creator, other)	Yes	Yes	Yes
By stage (how many are warm, booked, won or lost)	Yes	Yes	Yes

So you can answer simple questions in seconds. How many brands wrote to us this week? Is the website sending more than Instagram? Which month was our busiest?

WhatsApp note. WhatsApp needs a Meta-verified business number and approved message templates for first messages. We do the setup and the approvals.

How it fits your work

HOW YOU WORK	WHAT THE SYSTEM DOES
Paid or barter	Every creator is tagged paid, barter or undecided. The agent follows your own pricing and barter rules once your team shares them. The questionnaire is already with you.
Your voice	Replies are written like your team writes. A second AI checks each one before it goes out.
Your team first	If someone asks for a person, or your team has replied, the agent stops on that chat.
No guessing	It does not make up fees, dates or phone numbers. If it does not know, it says your team will confirm and adds a task.
Voice notes	The bot does not answer them. They are flagged for your team to listen to.
Daily report	A short report every day: chats handled, mistakes found, fixes made. Same as the record we shared.

How we roll it out

WHEN	WHAT HAPPENS	WHAT WE NEED FROM YOU
Week 1	Your pricing and barter rules go into the agent. The CRM is set up with your stages and tags. The 2,658 stored chats become the first profiles.	Answers to the questionnaire
Week 2	Website chat and form connected. Counts per day, week and month start.	Access to the website
Weeks 3 to 4	WhatsApp number verified, templates approved by Meta, then WhatsApp goes live. Team walkthrough of the CRM.	WhatsApp Business account access, and one 30 minute call
Every month	Daily reports, a monthly review call, and fixes within the same week.	One short call a month

Monthly price

- **Instagram**, kept live and checked every day
- **WhatsApp** on your verified business number
- **Website chat and form**, connected and sorted
- **One CRM** with stages, tags, tasks and enquiry counts
- **Setup, Meta approvals and team walkthrough** included

PER MONTH

₹29,999 / month

Everything listed above.
Meta's own WhatsApp charges are billed at cost by Meta.

Our promises

Accuracy
Better than today's **97%** within one week of using your pricing and barter rules.

Honest reporting
You see what the agent said, what it held back, and our mistakes too.

Your data
Every conversation and contact stays in your CRM. It is **yours**.

Next step: say yes and send the pricing and barter answers. We start Week 1 the same day. Instagram keeps running as it is while we build the rest.

Terms. Billed monthly. Cancel with 30 days' notice. Prices in Indian rupees, excluding GST. Dates depend on getting WhatsApp and website access on time, and on Meta's approvals.
